

Raise your sails

to go beyond with securities that cross the line.

Welcome to the next decade of capital markets that belongs to savvy issuers and visionary investors who stop choosing between DeFi and TradFi worlds. Sails.to is the comprehensive self-hostable platform for established businesses and KYC'd Professional Investors to issue, manage and trade hybridized Crypto and Bankable regulated Securities.

Market Opportunity & Problem

Pain Point	Current State
Trust/Corporate Setup	Days to weeks, multiple providers
Investment Access	High minimums, restricted products, slow onboarding
Private Placements	Uncertain outcomes: allocation, timing, investor follow-through; limited visibility into process
Securities Issuance	Months-long process; high legal, admin, banking, registry, trustee, and placement costs across multiple providers; limited distribution
Public Listings	Often unattainable for many issuers due to cost, disclosure burden, and operational overhead
Cross-border Payments	Expensive, slow, opaque
Crypto/Traditional Bridge	Regulatory gaps, compliance nightmares

Our Unified Solution: Single platform eliminating friction across all services—**30 minutes** from signup to full financial

capabilities.

Vision & Platform

Sails.to is an **AI-native, DLT-native (Distributed Ledger Technology), DeFi-integrated multi-channel financial services platform**—a one-stop financial services destination where a single onboarding and KYC/KYB profile unlocks multiple regulated services through one interface and one compliance layer.

Capability	Comparable To
Digital banking and investment/traditional brokerage	Revolut
Web-first corporate services	Osome.com
Digital securities platform	ADDX.com
Tokenization platform	Tokeny
Traditional brokerage	Saxo

Access Channels

Web (PWA), iOS, Android, In-wallet browser (WEB3), Telegram/Facebook bots, AI Agent + MCP Server

PWA = Progressive Web App (installable web experience on desktop/mobile without App Store/Play Store). **MCP Server** = standardized agent-connector layer that lets AI agents securely interact with services and tools.

Client Experience & Capabilities

Onboarding Journey

Entry Points (marketed as distinct services):

1. Trust Services → Investment vehicle setup

2. Incorporation Services → Fast company formation (minutes to days depending on structure)
3. Investment Services → Direct investment access

4. Digital Asset Exchange → VASP-regulated, limited scope
5. Remittance Services → Cross-border payments

Timeline: AI-powered verification → Full service access in **30 minutes**

Channels: Telegram bot | Mobile app | Web platform | Traditional communication

Seamless Integration: All services become available immediately upon registration and KYC approval through any entry point, with risk-based client adjustments.

Service Suite

Service Category	Details
Payment Services	Remittances, in/out payments, debit card issuance. Global-first roadmap (world coverage target), starting with MSB (Money Services Business)-regulated corridors and expanding jurisdiction-by-jurisdiction.
Crypto Exchange	Traditional cryptocurrencies only (VASP-regulated)
Traditional Brokerage	Direct share ownership, CFDs, Forex (Saxo-like capabilities, more advanced than Revolut)
Investment Hypermarket	• Traditional securities (paper or dematerialized) • Security tokens (STO) - OTC (Over-The-Counter) or listed via broker network • All under securities laws across jurisdictions • \$150,000 typical minimum investment (KYC'd Professional Investor threshold; eligibility varies by jurisdiction) • Placement through investment advice mandate • Ongoing fees: 1% annual Trust and Administration Fee (on nominal value); 3% of issuance amount reserved as security deposit under trust for fees, legal, and winding down

Brand Portfolio & Super-App Strategy

Multi-brand approach: Each brand targets specific market segments and regulatory requirements. The ecosystem includes issuance (Sails.to), brokerage (AiTX.pro), payments (Cca.sh), and secondary trading (trade.sails.to).

Brand	Function
Hrbr.Life	Holding Company
AiTX.pro	Mauritius Brokerage (Full Service Investment Dealer)
Sails.to	Securities Platform (STO issuance & distribution)
trade.sails.to	Secondary Trading Interface (OTC/RFQ trading via licensed broker network)
Cca.sh	MSB Platform (Money Services Business — remittances & payments)

Rationale	Explanation
Core Service Dependency	Each financial service naturally requires complementary services (e.g., company formation needs banking)
Unilever-style Segmentation	Market specific financial solutions to specific pain points
Cost-effective with AI	AI assistance and Social Media Marketing (SMM) tooling make parallel marketing streams economically viable
Larger Market Capture	Multiple entry points capture customers who wouldn't respond to generic "financial services"

Super-app philosophy: Capture customers through individual service needs, then seamlessly open entire ecosystem post-onboarding. Our technology stack makes this realistic and safe to execute at scale.

Core Assets & Infrastructure

Regulatory Foundation

Cornerstone License: "Full Service Investment Dealer (including OTC, excluding underwriting)" in Mauritius—FSC-licensed entity within group control.

Permission	Scope
Holding customer funds	Custody of client funds in connection with dealing activities
Investment advice	To suitable clients under mandate
Dealing in securities	Traditional securities (paper/dematerialized, listed/unlisted), Security tokens (STO), CFDs and OTC securities

Note: The licensed entity remains separate from the investment opportunity due to regulatory requirements.

Regulatory Expansion

Jurisdiction	License/Registration	Status
St. Vincent & Grenadines	Financial Trustee License (Operational Trust/escrow)	Approval in principle
Montana + Canada	MSB registration	Documentation under review
New Zealand	VASP registration	In preparation
Mauritius FSC	AI & Robotic investment advisory extension	Prepared, awaiting License 1 operational status

Technology Platform — Melusina OS

Component	Description
Melusina OS	Operating system/workflow layer for regulated operations—orchestration, audit trails, compliance reporting, and service integration
Core Architecture	Heavily modified Sandstorm.io providing grain isolation—per-service, per-customer isolation ensures complete security boundaries
Capability Routing	Clear routing makes integrating new services straightforward and safe; container-per-file isolation architecture
AML & Compliance Engine	KYC (Know Your Customer), KYB (Know Your Business), AML screening, transaction monitoring, suspicious activity workflows
Compliance Monitoring	Ongoing compliance monitoring and reporting system with audit logs
Bot Functionality	Telegram bot for instant client interaction
Crypto Integration	Optional authentication and transaction signing; verification across entire flow; critical for isolating human transactions from AI input
KYC/KYB System	AI-powered local ID verification
Client Applications	Native web and mobile apps

Key differentiator: Zero reliance on third-party software vendors

Platform Maturity (~70% of modules production-deployed; remainder in late-stage integration)

\$200M

Crypto project KYC/KYB processed

70,000

Users with advanced KYB

100%

Proven scalability & security

Platform certifications in progress: ISO compliance and GDPR certification with expert guidance.

Corporate Formation Capabilities

DAO (Decentralized Autonomous Organization): Wyoming and Marshall Islands DAO frameworks legally recognize corporate actions executed through smart contracts as valid. What would traditionally require a complex multi-section SPV and mountains of paperwork to execute becomes a smart-contract-governed structure — the Platform controls both the entity administration and the issuance, both as on-chain smart contracts.

Structure	Timeline	Details
Wyoming DAO LLC — New Series (Free)	Instant	Provision of isolated new series inside existing structure; Reg S/Reg D compliant; Fiat rails included
Own Standalone Entity (at extra cost)		
Marshall Islands DAO LLC	~30 days	Fully isolated standalone entity
Wyoming DAO LLC	~1 day	Fully isolated standalone entity; US Reg S/D filings, self-custody, smart contract governance
Optional Upgrades (at cost)		
ISIN + Clearstream	As needed	Traditional settlement rails (~\$4k, does not require own entity)
ISIN + Clearstream + ViennaMTF	As needed	Public listing on exchange (~\$3k additional, does not require own entity)

Back-Office Capabilities

Payment Processing

- ✓ Any flow
- ✓ Any channel
- ✓ Any purpose
- Fiat + crypto routing seamlessly

STO Packaging Speed

Due diligence completion	Baseline
Isolated vehicle creation	Minutes
Platform integration	Immediate

RWAT (Real World Asset Tokenization) Technology

- Ready fractional investment infrastructure for singular assets
- Enables both fractional purchase AND full asset buyout
- Applicable to real estate, art, commodities

Product types: Portfolios • Strategies • Investment products • Fractional ownership

Team & Expertise

Core Team

Name / Role	Background	Key Value
Alexei Karpov Founder & CEO	Tech startups, Online marketing, IT security, GMS+ Luxembourg Family Office, Bendura Private Bank Liechtenstein, Jurstax (Mauritius/DIFC/RAK Licensed)	Vision, strategy, trust & banking expertise
Lorinc J. Nyitrai Data Scientist	UBS, Allianz, TBS	Quantitative modeling & risk analysis
Rudi van der Lugt Financial Operations	Nomura, ABN AMRO, and other tier-1 financial institutions	Financial accountant, Securities back-office expert
Vladislav Mosokkov CTO	Deutsche Bank, Oilspace	Crypto/banking software architecture
Developers (3)	Full-stack	Extreme productivity via AI-first development

Other Candidate Board of Director Members

Name	Affiliation	Credentials
Jean-Luc Jourdan	GMS+ Family Office, Luxembourg	Court witnessed expert in economic and accounting matters, Chartered Professional Accountant, FINMA-Authorized Shareholder and Co-Founder of CIM Bank Geneva
Daniil Savitskii	Advokaadibüroo K&S Legal, Estonia	Member of the Bar in Tallinn, Member of the EUFA Juridical Committee
