

RAISE YOUR SAILS

to go beyond with securities that cross the line.

A regulated platform bridging DeFi and TradFi for compliant securities issuance and trading.

Raising: \$12.5M at \$37.5M pre-money

Post-Money Valuation: \$50M | Equity: 25%

Minimum Investment: \$150,000

Alexei Karpov — Founder & CEO

Telegram: @akarpovlux | Email: alexei@hrbr.life

THE PROBLEM

Capital Markets Are Still Forked

Issuers and investors still choose between worlds.

DEFI WORLD	TRADFI WORLD
Fast, global, 24/7	Slow, regional, T+2 settlement
Programmable, atomic	Paper-bound, manual reconciliation
Self-custody	Counterparty custody required
No institutional comfort	No retail/global reach
Regulatory gray zone	Heavy compliance burdens, multi-provider costs
Cost: Low infrastructure	Cost: \$100K+ per issuance (legal, admin, trustee, placement fees)
Timeline: Days	Timeline: Months

Pain Points

Securities Issuance: \$2T+ annual private placement market stuck in months-long process with \$100K+ issuance costs per deal across multiple providers. Limited distribution channels.

Private Placements: Uncertain outcomes (allocation, timing, investor follow-through). No visibility into process.

Settlement Delays: T+2 settlement (trade takes 2 business days) vs instant blockchain settlement creates counterparty risk and capital inefficiency.

Crypto/Traditional Bridge: Regulatory uncertainty forces choice between innovation and compliance. No clean interoperability.

"The instrument is the same. The packaging shouldn't force a choice."

THE SOLUTION

One Security, Any Format

We built the bridge.

Same security, cap table, economics. Solana is canonical. ISIN is 1:1 via lockbox.

What We Built

- Issue securities **once** (licensed trustee)
- Settle on Solana (instant, atomic)
- Optional ISIN to Clearstream (~\$4K, ~1 week)
- KYC'd investors **convert formats** when enabled (Solana ↔ ISIN, 1:1)
- Broker-mediated OTC network (operational)

Key Rules

- Only KYC'd Professional Investors (\$150K min)
- Broker-mediated transfers (no DEX)
- On-chain credentials enforce eligibility
- Atomic settlement (instant, not T+2)
- Issuer controls conversion (Trust oversight)

The "A-ha": Your security can sit in a Solana wallet in Singapore AND via Clearstream in Geneva —

same cap table, same economics. Lockbox ensures 1:1 backing.

THE PLATFORM

Not Just Tokens.
The Full Stack.

Why the Stack Matters

- **Integrated:** MSB enables fiat rails for STO
- **Self-hosted:** Zero vendor dependency
- **Licensable:** Melusina white-label revenue
- **Entity Structure:** Licensed subs flow 80% profit to Hrbr.Life holding

Operational Status

Hrbr.Life	Holding (investors invest here)
AiTX.pro	Mauritius Brokerage  <i>Licensed</i>
Sails.to	STO on Solana (70%, beta Q4 '25, launch Q1 '26)
Trust Entity	SVG Trustee  <i>Approval in Principle</i>
Cca.sh	MSB (licensing Q1-Q2 '26)

ISSUANCE PROCESS

As Fast As 2 Weeks, Not 6 Months

From zero to funded in as little as two weeks (for typical clean cases).

Enabled by: Pre-approved legal templates + Instant Wyoming DAO LLC formation + On-chain escrow via licensed trustee

PHASE	STATUS	KEY CHARACTERISTICS
Phase A: ESCROW	Pre-Soft Cap	Funds held in licensed trust escrow (our SVG trustee entity) • Optional early-bird discount • Full refund if soft cap not reached
Phase B: FUNDING	Post-Soft Cap	Funds released to issuer as received • Full price, distribution continues • Only issuer + brokers may allocate
Phase C: ACTIVE	Closed	Offering complete, unsold tokens burned • Secondary trading enabled (OTC) • Conversions open to KYC'd holders

Soft Cap Miss = Zero Investment Risk

Investors receive invested capital back via smart contract + legal structure (capital protected). Only minimal admin fees apply (0.5% brokerage + Clearstream if used).

TRADING MECHANICS

Broker-Mediated, Compliance by Design

How securities actually trade.

The "Broker Hop"

- ✓ KYC verified at each step
- ✓ Brokers are counterparty of record
- ✓ No permissionless access
- ✓ Atomic settlement (instant DvP)
- ✓ 0.5% fee (paid by buyer), split three ways
- ✓ **Network seeded from day 1** with our licensed Mauritius broker; additional partners onboarding

Conversion (Solana ↔ ISIN)

- Issuer controls conversion (Trust oversight via SVG licensed trustee)
- Always 1:1 backed (lockbox held under regulated trust entity)
- KYC'd holders may initiate (when enabled by issuer)
- Conversion fee: 0.10–0.25% (capped)
- ISIN setup: ~\$4K, ~1 week

Key Principle: Total outstanding tokens (on-chain + ISIN) always equals minted supply. Lockbox ensures 1:1 backing at all times.

REVENUE MODEL

We Eat When You Eat

Zero upfront fees. Pay on success.

STREAM	FEE	WHO PAYS	NOTES
Issuance (direct) ⚡	0.5%	Issuer	Your network, your referral code — <i>immediate revenue</i>
Issuance (broker) ⚡	6%	Issuer	Our OTC broker network — <i>immediate revenue</i>
Secondary trading ⚡	0.5%	Buyer	Split: ⅓ platform, ⅓ buy-broker, ⅓ sell-broker — <i>recurring</i>
Trust & Admin ⚡	1%/year	Issuer	On nominal value — <i>recurring annual</i>
Security deposit	3%	Issuer	Reserved under trust (covers fees, legal, winding down) — <i>refundable minus costs</i>
Conversions ⚡	0.1-0.25%	Requester	Solana ↔ ISIN — <i>immediate when conversion enabled</i>
MSB corridors ➡ SOON	0.5-2%	Sender	Remittance spread — <i>Year 2 focus</i>

STREAM	FEE	WHO PAYS	NOTES
Melusina licensing 	\$5K-50K/ yr	Operator	White-label SaaS deployments — scaling from Year 2

Total Platform Take: ~1.5% (referral channel: 0.5% issuance + 1% trust/yr) vs ~7% (general channel: 6% issuance + 1% trust/yr)

 = Core near-term revenue (Y1-Y2) |  = Future expansion revenue | Competitive: Traditional banks charge 5-10% for similar services

Unit Economics: \$10M Raise via Broker Network

Issuance fee: **\$600K** (6% of \$10M)
 Security deposit: **\$300K** (3%, reserved)
 Annual trust fee: **\$100K/yr** (1% of nominal)
 Secondary trading: **\$10K/yr** (est. 20% turnover × 0.5%)

Year 1 platform revenue per issuer: **~\$700K**

Soft Cap Miss: Only 0.5% brokerage + Clearstream fees apply (no 6% distribution fee)

PROOF OF CONCEPT

Platform, Not Pitch

We're not pitching a deck. We're pitching a platform.

\$200M

KYC/KYB PROCESSED

70,000

USERS VERIFIED

~70%

PLATFORM COMPLETE

3-5

PILOT ISSUERS ONBOARDING

Note: \$200M KYC volume from prior compliance infrastructure business (crypto project clients). Platform leverages this proven KYC/compliance foundation + 7 years Melusina OS development.

Regulatory Milestones

JURISDICTION	LICENSE/REGISTRATION	STATUS
Mauritius	Full Service Investment Dealer (FSC)	✅ Licensed (in group control)
St. Vincent & Grenadines	Financial Trustee License	✅ Approval in Principle
Montana + Canada	MSB registration (for fiat on/off-ramps)	📄 Documentation under review (Q1–Q2 '26)
New Zealand	VASP registration (crypto exchange services)	📄 In preparation (Q2 '26 target)

Strategic Board Addition

Former CEO, State Bank of Mauritius + Airports of Mauritius

Joining as Board Member and Chief Strategy Officer

- ✓ Direct access to Mauritius financial regulators
- ✓ Banking network relationships
- ✓ Sovereign fund connections
- ✓ Government-level credibility

Impact: Transforms profile from "startup" to "institutional platform with government-level relationships"

MARKET POSITION

Everyone Built Half of It

The full-stack, self-hosted, multi-format edge.

COMPETITOR	WHAT THEY DO	WHAT THEY DON'T
Securitize / ADDX	STO platforms (US/ Singapore focus)	No self-custody, no DeFi integration, multi-vendor costs, platform lock-in
Tokeny / Polymath	Tokenization infrastructure/chain	No distribution, no trading network, no proven TradFi bridge
Fireblocks	Custody/infrastructure (MPC wallets)	No issuance layer, no compliance layer, no legal structure
Clearstream	Traditional settlement infrastructure (T+2)	No blockchain native, slow settlement, expensive — <i>We integrate with them, not compete</i>

Note: Clearstream is infrastructure we bridge to (via ISIN), not a competitor. Others either avoid or can't integrate with traditional rails.

Our Moat: 5 Pillars

1. FULL STACK

Issuance + distribution + trading +
settlement + fiat rails

2. SELF-HOSTED

Zero vendor dependency, issuer
controls their data. Melusina OS: 7 years
proven

3. MULTI-FORMAT

Same security on Solana, TON, or ISIN.
Interchangeable for KYC'd investors

4. BROKER NETWORK

Compliance built in, not bolted on. OTC
network operational from day one

5. AI-NATIVE DEVELOPMENT

7-person team achieved what would
require 20–30 traditional developers.
Built with AI-first methodology (not
retrofitting). Example: compliance
module built in 1 month vs 6+ months
traditional. Speed = competitive moat.

THE TEAM

Built the Boring Parts of Finance

The people who built the institutions we're now disrupting.

Core Team

NAME / ROLE	BACKGROUND	BRINGS
Alexei Karpov Founder & CEO	GMS+ Luxembourg Family Office, Bendura Private Bank Liechtenstein, Jurstax (Mauritius/DIFC/RAK)	Trust/banking expertise, regulatory navigation, 15+ years financial services. Extensive HNWI/institutional network for issuer/investor BD
Vladislav Mosokkov CTO	Deutsche Bank, Oilspace	Crypto + banking software architecture, distributed systems
Lorinc J. Nyitrai Data Scientist	UBS, Allianz, TBS	Quantitative modeling, risk analysis, compliance algorithms
Rudi van der Lugt Financial Operations	Nomura, ABN AMRO, tier-1 institutions	Securities back-office, settlement operations, post-trade

NAME / ROLE	BACKGROUND	BRINGS
Anoop Narayan Chief Financial Officer	Big 4 audit, fintech CFO roles	Financial operations, compliance structuring, fundraising strategy
3 Full-stack Developers Engineering	AI-first development methodology	Hyper-productive: team of 7 achieving output of 20-30 traditional developers

Advisory Bench

NAME	AFFILIATION	CREDENTIALS
Jean-Luc Jourdan	GMS+ Family Office, Luxembourg	Co-Founder CIM Bank Geneva (FINMA-authorized), court-witnessed expert
Daniil Savitskii	K&S Legal, Estonia	Securities & banking law specialist, EU regulatory expert
Akis Papakyriacou	Papakyriacou LLC, Cyprus	Top-ranked securities lawyer (Legal 500), banking & capital markets

Core team has collaborated on Melusina OS development since 2018. Full-time, Luxembourg/Mauritius-based with presence in key regulatory jurisdictions.

Development Methodology: 7 years Melusina OS foundation (2018–2024) → 20 months AI-assisted acceleration → 6 months AI-first (2025). Result: Team of 7 achieved what traditionally requires 20–30 developers — 10x efficiency via AI-native approach, not retrofitting legacy systems.

DISTRIBUTION STRATEGY

Five Doors, One Ecosystem

Super-app strategy: capture via one door, open the entire ecosystem.

Super-App Strategy: Capture via any door → Single KYC unlocks entire ecosystem → Multiple revenue streams per user → High LTV, Low CAC

GTM Phases

PHASE	FOCUS	TIMELINE	KEY MILESTONES
Now	Crypto-native issuers, existing network	Private Beta	3–5 pilot issuances (DeFi projects, tokenized funds), broker partnerships (Mauritius base + 2–3 regional brokers)
6 months	SME capital raises (\$5M–\$50M), MENA expansion	+6 mo	10+ issuers, \$50M+ volume — <i>MENA: strong demand for Shariah-compliant tokenized structures + existing Dubai/ Mauritius regulatory bridge</i>
12 months	Institutional funds, white-label Melusina	+12 mo	3+ white-label operators, \$150M+ annual volume, path to profitability clear
24 months	Vienna MTF pipeline, broker network at scale	+24 mo	Category leader, \$500M+ annual volume

Distribution Channels

- **Direct (Priority 1):** Issuer network acquisition via founder relationships (low CAC, high trust)
- **Broker partnerships (Priority 1):** Licensed OTC dealers bring investor base (fee share model incentivizes growth)
- **AI agents + Telegram bots:** Early tests show promise for scalable outreach to accredited investors on crypto social channels (pilot: ~400 qualified leads). *Designed within Reg D/Reg S marketing constraints.*
- **Super-app integration:** Single KYC unlocks trust, exchange, remittance — cross-sell expected to materially reduce CAC (internally modeled ~60% vs single-product funnels)

5-Year Vision & Network Effects

- \$3B+ in annual issuance volume
- \$100M+ platform revenue
- 20+ active brokers on OTC network
- 10+ white-label Melusina operators
- Category leader in tokenized securities infrastructure

Network Effects: More brokers → more liquidity → more issuers. More services → higher user LTV → lower CAC. Each entry point feeds the ecosystem, creating compounding growth and defensibility.

THE ASK

\$12.5M for 25%
Post-Money

Transparent structure, aligned incentives.

RAISING	PRE-MONEY
\$12.5M	\$37.5M
POST-MONEY	EQUITY SOLD
\$50M	25%
MIN INVESTMENT	
\$150K	

Cap Table Structure

Pre-Money Structure Explanation: Initial funding structure used a 1:1:1 matching mechanism for early stakeholders (300k share pool, 170k issued):

- 5.61% → **Early Backers** (crypto-native angels, family offices)
- 5.61% → **Strategic Marketing Partners** (early BD partners who opened broker/institutional

networks)

- 5.61% → **Founder + Management Team** (matching allocation)

This 3× matching structure (16.83% total) is **pre-money** and will **not be topped up**. All holders dilute equally post-close. For simplicity, table below aggregates Early Backers + Strategic Marketing as "Existing Investors" (11.22%).

Pre-Money (Before Investment)

Existing Investors (Early Backers + Strategic Partners)	11.22%
Founder + Management Team	5.61%
Founder Base	83.17%
Total	100%

Note: "Existing Investors" aggregates two 5.61% pools (Early Backers + Strategic Marketing Partners) = 11.22% combined. No special anti-dilution rights for any pre-money holders.

Post-Money (After \$12.5M Close)

New Investors (This Round)	25.00%
Existing Investors (Early Backers)	8.41%
Founder + Management	4.21%
Founder base	62.38%
Total	100%

All pre-money holders diluted by 0.75× (standard post-money dilution). Founder retains 62.38% — substantial alignment with new investors.

Equity Incentive Program (4-Year ESOP)

Employee Stock Ownership Plan (ESOP): 5% new share issuance per year for 4 years = **~20% ESOP pool** (18.55% of fully-diluted cap table after 4 years). Allocated to 5 senior team members (Vlad, Lorinc, Rudi, Anoop, Daniil) at 1%/year each. *All shareholders dilute pro-rata — no protected classes.* New investors go from 25.00% → 20.57% over 4 years.

YEAR	NEW INVESTORS (THIS ROUND)	EARLY BACKERS	FOUNDER+MGMT	FOUNDER BASE	ESOP POOL
Y0 (Close)	25.00%	8.41%	4.21%	62.38%	0%
Y1	23.81%	8.01%	4.01%	59.38%	4.76%

YEAR	NEW INVESTORS (THIS ROUND)	EARLY BACKERS	FOUNDER+MGMT	FOUNDER BASE	ESOP POOL
Y2	22.68%	7.63%	3.82%	56.53%	9.05%
Y3	21.60%	7.27%	3.64%	53.82%	12.86%
Y4	20.57%	6.93%	3.47%	51.26%	17.77%

Deal Terms:

- ✓ **Equity Structure:** Priced round at \$50M post-money (\$37.5M pre + \$12.5M new)
- ✓ **Dilution:** All shareholders dilute pro-rata by ESOP program (no anti-dilution, no protected pools)
- ✓ **Governance:** Standard board seat for lead investor (if \$2M+ commitment) + information rights
- ✓ **Alternative Structure:** Convertible note available (discount/cap TBD) — structured to convert at Series A with standard terms

Entity & Profit Flow: Investment is in Hrbr.Life (holding company). Licensed subsidiaries (Broker, Trustee, MSB) flow 80% of profit upstream to holding. Valuation reflects holding-level ownership of all IP, licenses, and cash flows. Remaining 20% retained in subs for regulatory capital requirements.

Use of Funds

ALLOCATION	AMOUNT	%	PURPOSE
Engineering	\$4.4M	35%	Platform completion, multi-chain, smart contract audits

ALLOCATION	AMOUNT	%	PURPOSE
Regulatory	\$2.5M	20%	License applications (5+ jurisdictions), compliance, legal
GTM/Sales	\$2.5M	20%	Issuer acquisition, broker partnerships, brand building
Operations	\$1.9M	15%	Team scaling (7 → 15 people), infrastructure
Reserve	\$1.2M	10%	Working capital, opportunities, contingency
Total	\$12.5M	100%	

24-Month Milestones (What This Unlocks)

- ✓ **Technical:** Platform 100% complete • Multi-chain operational (Solana + TON) • 5+ white-label operators
- ✓ **Regulatory:** 5+ jurisdictions operational • MSB corridors live • VASP registration complete
- ✓ **Commercial:** \$500M+ annual issuance volume • 100+ deals closed • 20+ active brokers
- ✓ **Financial:** Break-even at ~\$15M revenue (achievable end of Y2) • Positioned for Series A at \$100M+ valuation

THE CLOSE

The Next Decade of Capital Markets Starts Here

1. THE MARKET IS MOVING

Tokenized securities went from concept to BlackRock's \$100M+ BUIDL money market fund in 5 years.* The infrastructure layer is up for grabs. First-mover with full-stack + regulatory approval wins.

**BlackRock launched BUIDL tokenized fund on Ethereum (March 2024), followed by expansions. Larry Fink: "The next generation for markets... will be tokenization of securities."*

2. WE BUILT THE FULL STACK

Not a feature. Not a protocol. Not a wrapper. A complete, self-hosted platform that works today. 70% deployed. \$200M KYC processed. 7 years of development.

3. WE KNOW THE TERRAIN

Built by people who've done trust, banking, and compliance at the highest levels. Deutsche Bank. UBS. Nomura. ABN AMRO. FINMA-authorized advisors. Former CEO

State Bank Mauritius joining as board member and CSO.

Partner with us to own the infrastructure layer.

\$12.5M for 25% of the platform that bridges two worlds.

Target Close: Q1 2026 | Strong interest from multiple investors (~40% allocation in advanced conversations)
